SUMMARY

Java backend engineer with 5.6+ years of experience across backend services, enterprise applications, data processing, and real-time systems. Experienced in building REST APIs and backend workflows using Java, Spring Boot, Spring Security, JPA/Hibernate, and PostgreSQL, with exposure to distributed systems, messaging, and production operations. Built payment middleware, backend APIs, and data-processing workflows, with additional hands-on experience in Kafka, Redis, Docker, and Kubernetes.

SKILLS

Languages : Java, Python, SQL, Kotlin
Backend : Spring Boot, Spring MVC, Spring Security, JPA/Hibernate, REST APIs, Microservices, WebSockets
Data & Messaging : PostgreSQL, Redis, Kafka, RabbitMQ
DevOps : Docker, Docker Compose, Kubernetes, Jenkins, GitHub Actions, AWS (basic)
Concepts : System Design, Distributed Systems, Concurrency, Idempotency, Outbox Pattern, DSA
Real-time & AI : WebRTC, LiveKit, LLM APIs (OpenAI, Groq), RAG, Tool Calling, MCP
Testing : JUnit 5, Mockito, Testcontainers, integration and concurrency testing

PROJECTS

PayWallet – Wallet & Payments Backend GitHub

Java 21, Spring Boot 4, PostgreSQL, Kafka, Razorpay (test mode)

- Built an idempotent double-entry ledger and payments backend; proved with concurrent tests that duplicate requests move money only once.
- Implemented card/UPI top-ups, refunds and payouts (UPI and payout providers simulated) with signed webhooks and Kafka outbox events, plus JWT auth and rate limiting.

Drawspace – Canvas Editor GitHub

Java 21, Spring Boot, Spring Cloud Gateway, Spring Security, PostgreSQL, Flyway, Docker; Next.js

- Designed a multi-service backend comprising authentication, canvas, and asset services, with Spring Cloud Gateway handling JWT validation and rate limiting.
- Implemented authenticated canvas CRUD operations, ownership checks, database migrations, and public read-only sharing links.
- Integrated a Next.js/Fabric.js editor with backend APIs for saving canvases, exporting images and JSON, and sharing content.

EXPERIENCE

NeoSOFT Pvt. Ltd. Feb. 2024 – Jul. 2026

Software Engineer Mumbai, India

Jio Tesseract – smart-glasses platform

- Designed a modular SDK encapsulating device communication, audio processing, and API integrations, with defined interfaces between application components and external services.
- Integrated LiveKit/WebRTC streaming into an AI-enabled workflow, supporting real-time video interactions and backend request monitoring.
- Built AI proofs of concept using OpenAI and Groq APIs for translation, voice interaction, summarization, and intent detection.
- Prototyped reliable WebRTC file transfer with NACK-based retransmission and RSA/AES encryption.

- Authored high-level and software architecture documents covering components, data flows, and system integrations.

SuperUs Systems Pvt. Ltd. Dec. 2022 – Nov. 2023

Senior Software Developer Mumbai, India

- Built an end-to-end ESL template platform: a Spring Boot backend and REST APIs (create, edit, import, export, persist) with a ReactJS + Fabric.js canvas editor. Added tag-based dynamic templates, where designers tag text fields once and the Android app fills them at runtime, so one template serves every user instead of a separate design per person.
- Developed a Java middleware for real-time UPI payments: generated dynamic QR codes from transaction data (UPI ID, amount), pushed them to QR devices over serial communication, and managed device states across initiation, success, failure and idle.
- Built REST APIs and backend workflows for a meeting-room solution (availability, scheduling) and a digital-signage content platform (scheduling and delivery of images, videos, web content).
- As part of a small startup team also worked on: Android/BLE ESL apps (20% faster image transfer), a battery-analytics app for ESL tags, and a Java-to-Kotlin migration of a legacy app; presented the products at a 3-day showcase in BKC, Mumbai.

Tata Consultancy Services Jan. 2021 – Dec. 2022

Assistant System Engineer Mumbai, India

- Built and ran PySpark jobs with Hive queries on HDFS for large-scale data processing; validated new model versions, verified outputs and promoted them to higher environments.
- Maintained a production reporting platform generating 200+ reports daily: monitored scheduled jobs, debugged production issues, ensured reliable delivery.
- Built a Flask + Jinja2 portal automating model-testing workflows; supported Docker, Kubernetes and Jenkins CI/CD deployments. Three process improvements saved CAD 3,000 annually.

EDUCATION

University of Mumbai Jul. 2016 – Oct. 2020

Bachelor of Engineering in Computer Science Mumbai, India
